The investigation and cleanup of the former Aerovox facility in New Bedford, which was the predominant source of PCB contamination to the harbor, is being performed by AVX, the responsible party, under the state's 21E cleanup program. Investigations have demonstrated that DNAPL exists at the eastern boundary of Site adjacent to the harbor, triggering an Immediate Response Action (IRA), and that PCB/CVOC contaminated groundwater migrates to the harbor. These continuing sources to the harbor must be addressed in order for EPA to complete the Superfund cleanup. In August 2016, AVX submitted its Phase III Remedial Action Plan. EPA is coordinating with MassDEP on AVX's IRA activities and Phase III. Under the Phase III, the remedy will not be constructed until Fall 2019. This may impact the EPA Superfund cleanup schedule. Any further delays in the selection of a final comprehensive remedy will further delay the Superfund cleanup.
